SPADE Administrative Note #176   K. Sei
                                                  10 Dec. 1971

                        SPADE Meeting

PRESENT: Johnny, Lou, Bill, Howard, Chuck, Kelvin, Dave F., Eve,
          Jon, Mark K. (late)

BUG LIST: Chuck feels too much documentation is being done on
           37 Teletypes.

           #22 - Bug with state MASTER thinks the user is in. Code
           is to be fixed.

NEW NCP: When is it to be installed? All important programs, save
          RJSNET, are done. Mark K. is presently in final. Will
          be done when RJSNET is done. (Aside: Mark K. said the
          RJSNET is ready except for one event that will be fixed)

DOCUMENTATION: Restriction to "Logger" in documentation is mis-leading.
                Actually involves sys-bit & I/O - bit flags. Need
                to clarify; e.g. "need sys-bit" instead of "restirction
                to logger".

                Howard's design notes. Corrections, VP# should be
                changed to FP#. Files will be type 1.

MEASUREMENT PROGRESS: Design Note #89 coming out today. Suggests
                       necessary changes, etc. people should read it.

PLAN: Decided against MACRO Assemblers, new compilers, etc. Howard
       brought out fact that we have access to UCSB's file storage
       system. Thus, we don't need directoried tapes.

TIME-FRAME FOR THE PLAN

I = immediate; forsee that it will be completed within 3 months.

S = short-term

0 = On-going

L = Long-Term
